

Advanced Technical Certificate in Project Management

Earn a credential that is highly prized by employers seeking skilled managers in a wide range of industries. Project managers plan, coordinate, implement and finalize complex projects according to specific standards, deadlines and budgets. They may be responsible for launching new products, managing construction projects or manufacturing processes, implementing new technical systems or standardizing procedures to ensure quality control throughout a product lifecycle.

- Learn scheduling and logistics, quality management, business process analysis, project risk management and more.
- Certificate can be earned as part of Daytona State's Bachelor of Applied Science in Supervision and Management (BAS) degree or as a stand-alone certificate for anyone who has already earned a two-year associate degree.
- Sit for eight different industry certifications as you move through the program.
- Financial aid is available.
